On April 23, 1981, an off-site inspection of this closed and covered general refuse landfill site was conducted. The inspection disclosed no major problems, however, some small leachate seeps and stains were evident.

In discussing the site with Mr. Kenneth Bechely of the Illinois Environmental Protection Agency, I was advised that this site never accepted any hazardous wastes.

In addition, Mr. Bechely advised that the IEPA and the DuPage County Forest Preserve have recently obtained a cooperative agreement that insures that any leachate problems at the site will be corrected. The agreement requires the County Forest Preserve to install drainage tiles to collect the leachate and pump it back into the site. The Forest Preserve is also putting additional groundwater monitoring wells at the site, although the groundwater pollution potential of the site is extremely low due to the extensive depth of blue clay in which this site was developed. Soil boring results are available at the IEPA offices and are included in the site's IEPA permit.

In light of the above and due to the fact that the IEPA is actively monitoring this closed and covered facility, no further follow-up action is recommended.
